

Corteva Agriscience 2030 Sustainability Goals

Our Operations

Every new Corteva Agriscience product will meet our sustainability criteria by 2025

- Every new product will be assessed at stage gates from its concept inception and throughout its development to ensure that it meets baseline requirements, advances in at least one sustainable innovation criterion, and maintains the level of performance for all other sustainability criteria across the life cycle (product and packaging) compared to a current Corteva product it would replace (or equivalent).
- Improvement must be measurable within a year (unless otherwise indicated). Evaluations include the entire value chain from raw material to end-of-life (for the product and packaging), and all criteria, to ensure no shifting of burdens from one part of the value chain to another.

Sustainable innovation criteria

Meets baseline requirements, delivers at least one notable sustainability advantage, and maintains the level of performance for all other sustainability criteria across the life cycle (product and packaging) compared to a current Corteva product it would replace (or equivalent).

Corteva's sustainable innovation criteria= 1-12 in black bold text

1. Improve resilience of agricultural production
2. Increase access to safe, nutritious, and sufficient food
3. Support genetic diversity of seeds and cultivated plants

4. Improve water quality
5. Increase water use efficiency

6. Reduce waste and improve product application efficiency
7. Reduce food waste
8. Use safer materials in manufacturing and finished products
9. Use sustainably sourced renewable inputs

10. Reduce greenhouse gas (GHG) emissions

11. Improve soil quality and restore degraded land
12. Protect biodiversity and ecosystems

Corteva Agriscience 2030 Sustainability Goals

Our Operations

Every new Corteva Agriscience product will meet our sustainability criteria by 2025 (continued)

| Criterion | Threshold – Beyond Current Market Option |
|---|---|
| 1. Improve resilience of agricultural production | Improvement of at least 1.5% in genetic gain or yield under standard conditions |
| 2. Increase access to safe, nutritious, and sufficient food | Provides a nutritionally significant improvement in a typical diet (i.e., 10% more) |
| 3. Support genetic diversity of seeds and cultivated plants | Contributes to new meaningful germplasm diversity for food crops and wild food crop relatives used in cultivation, to provide more reliable productivity or reduced vulnerability to pest and environmental risks |
| 4. Improve water quality | Improves water quality with at least 10% improvement in nitrogen or phosphorus use efficiency or removal of chemical leaching |
| 5. Increase water use efficiency | At least 10% improvement in water use efficiency |
| 6. Reduce waste and improve product application efficiency | At least 25% improvement in waste reduction, product application efficiency, or packaging material use (or similar packaging improvement; connected to Green Chemistry Principles) |
| 7. Reduce food waste | At least 5% less food waste at production (e.g., harvest loss) or post-harvest stages under standard conditions for food crops |
| 8. Use safer materials in manufacturing and finished products | Demonstrated to be substantially safer for human health and the environment - through hazard classification or relative risk ranking (connected to Green Chemistry Principles) |
| 9. Use sustainably sourced renewable inputs | Use of bio-based by-products or third-party verified sustainably sourced renewable materials for product manufacture (connected to Green Chemistry Principles) |
| 10. Reduce greenhouse gas (GHG) emissions | At least a 10% reduction in GHG emissions (connected to Green Chemistry Principles) |
| 11. Improve soil quality and restore degraded land | Support a statistically significant improvement in the soil health index score in more than one key indicator (e.g., Comprehensive Assessment of Soil Health (CASH) considering combined scores for aggregate stability and active carbon at a minimum) |
| 12. Protect biodiversity and ecosystems | Improved health of pollinators, forests, wetlands, and other natural ecosystems without negative impacts to the system |

Corteva Agriscience 2030 Sustainability Goals

Our Operations

Establish our climate strategy for scope 1, 2, and 3 emissions, including appropriate reduction targets by June 1, 2021

- Due to the seasonal nature of our business, an annual baseline of greenhouse gas (GHG) emissions must be developed before making a public commitment.
- We became an independent public company on June 1, 2019 and are currently generating this full-year baseline to inform our forthcoming goal. We will establish a climate strategy in the coming year.
- We are following the Greenhouse Gas Protocol for the development of our climate strategy.

Corteva Agriscience 2030 Sustainability Goals

Our Operations

All packaging will be reusable or recyclable by 2030

- We plan to establish a baseline/definition for reusable or recyclable based on industry standards in all regions for all packaging components and/or configurations of finished product, understanding regional situation and regulatory considerations.
- This target will assess primary, secondary and tertiary packaging.
- We recognize there is a meaningful difference between packaging that is reusable or recyclable by design, and packaging that is reusable or recyclable in practice.
- We plan to proactively influence our industry in container management programs, and partner with other organizations to educate end users on opportunities to recycle products.

Corteva Agriscience 2030 Sustainability Goals

Our Operations

Operate every Corteva Agriscience site more sustainably through waste reduction, water conservation, and enhanced biodiversity

- This target is supported by eight indicators:
 - 100% of seeds operations achieve Zero Landfill Status
 - Achieve an average 20% Process Mass Intensity (PMI) reduction for all new molecule launches within 4 years of launch
 - Reduce water usage in high stress and stressed areas by 10%
 - Implement customized biodiversity action plans at 100% of our agronomic research centers and Corteva corporate sites
 - Integrate industry-leading transparency processes and practices into our business operations
 - 100% of priority suppliers meet procurement sustainability targets
 - 25% of global procurement spend will be with diverse and small businesses
 - By 2025, 100% of our supplier community will attest to or affirm agreement with Corteva Supplier Code of Conduct guidelines and requirements
- PMI is a calculation that measures the amount of materials used to create a given amount of chemical products. [PMI = total quantity of raw materials (kg)/total quantity of active produced] It is useful for identifying opportunities for improvement in process efficiency. Recent research has applied PMI to biologics.
- We will use the PMI Calculator from ACS Green Chemistry Institute to track progress against this target. <https://www.acs.org/content/acs/en/greenchemistry/research-innovation/tools-for-green-chemistry.html>
- We will use the WRI Aqueduct tool to identify sites in high water stress and water stressed areas.
- Customized biodiversity action plans will have a global approach that leads to local implementation addressing local biodiversity concerns. The scope is broad enough to recognize varied approaches to biodiversity that fit unique land uses, without sacrificing our goal of food productivity and efficiency (co-existence). Customized action plans will include a menu of locally relevant actions that land managers can take.
- We will pursue opportunities to engage local communities in implementation of customized biodiversity action plans.
- We define priority suppliers to include packaging and chemical suppliers.
- We have joined Together for Sustainability to support this target.
- Our Supplier Code of Conduct can be found at https://www.supplier-center.corteva.com/content/dam/dpagco/supplier-center/files/code_of_conduct.pdf
